DETAILED ACTION

Election/Restrictions

Claims 7-13 have withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 08/14/2008.

Claim Objections

Claims 1 and 14 are objected to because of the following informalities: --other—should be inserted before "electromagnetic waves" because "infrared rays" are also known to be a type of an electromagnetic radiation.

Claims 1 and 14: perhaps applicant should insert —, mixed— after "crushed" in line 6 of claim 1 and --, mixing— after "crushing" in line 6 of claim 14 in order to properly describe the invention since the term "crush" is considered to be a broad term.

Appropriate correction is required.

Allowable Subject Matter

Claims 1-6 and 14-20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 1-6 are allowed because the prior art fail to teach

A substrate temperature apparatus for measuring the temperature of a substrate, said apparatus comprising:

a chip made of metal material reflecting infrared ray or rays and other electromagnetic waves;

said chip having an insertion opening for inserting thermocouple wires and which is crushed and deformed with said thermocouple wires inserted to unite said chip

Art Unit: 2855

together with said thermocouple wires;

a supporting member or members made of material of lower thermal conductivity than said chip, for supporting said chip, in combination with the remaining limitations of claims 1-6.

Claims 14-20 are allowed because the prior art fail to teach

A method for measuring the temperature of a substrate, the method comprising: providing a chip of metal material which reflects infrared rays and other electromagnetic waves;

inserting thermocouple wires into an insertion opening provided in said chip;

crushing and deforming said chip with said thermocouple wires inserted to unite said chip and said thermocouple wires together;

supporting said chip with a material of lower thermal conductivity than said chip, in combination with the remaining limitations of claims 14-20.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The prior art cited in the PTO-892 and not mentioned above disclose related devices and methods.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Gail Verbitsky whose telephone number is 571/272-2253. The examiner can normally be reached on 7:30 to 4:00 ET.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Edward Lefkowitz can be reached on 571/272-2180. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
